

Press Release

June 12, 2007

New Water Solutions, Inc. introduces the Drainsafe, DS 360. This product will have the ASME/ANSI A112.19.8 (1997) Third Party Certification issued via NSF International. The DS 360 is completing NSF 50 testing at this time.

This new product minimizes all suction outlet hazards including; body entrapment, limb entrapment and hair entanglement, and also eliminates disembowelment and the potential for evisceration if properly attached.

Along with wall (vertical) or floor (horizontal) mounting capabilities, the DS 360 has a universal installation kit included with each part.

The DS 360 comes complete with a twelve piece 316 grade stainless steel fastener kit (Uni-Screw), including tool. The included Uni-Tool insures curious children can not remove the DS 360 with a typical screw driver. Uni-Screw technology insures ease of installation and a secure, snug fit onto any existing sump.

The DS 360 has a superior safe flow rate of 123 gallons per minute, and is constructed of NSF 61 Certified PVC material, 18 ounces in weight.

Not to take away from the inherent safety elements, the DS 360 is compatible with all vacuum and or pressure operated pool cleaners.

The DS 360 also has a conventional “look” and compliments most all pool interior finishes exposed aggregate, cement type plaster products, as well as fiberglass or vinyl.

The DS 360 meets all I-Code requirements and is indeed one “layer of protection” as recommended per the Consumer Product Safety Commission.

Even with best of the best anti-entrapment suction outlet protection installed, it is still important to remember: Never leave a child alone by water, any water.
